

ICEE INSTRUCTIONS

in the event of a long term closure

In the event that your premises instructed to close, Vimto recommend that you follow the below procedure in relation to your ICEE units. In the first instance we would recommend leaving the ICEE units switched on, and the CO2 maintained throughout the duration of your shutdown, should this not be possible, please follow the guidelines below. The system is a sealed system using CO2 at high pressure, this greatly reduces the growth of bacteria within the system. Therefore;

CLOSURE OF 1 – 45 DAYS

1.

• Disconnect the ICEE unit from its individual power source

2.

• Turn the gas valve on the CO2 bottle to the OFF position

3.

• **DO NOT** drain any product from unit in this closed down state.

4.

• On re-opening: Restore the CO2 supply.
• Restore the power supply to each unit

5.

• Pres OFF DEFROST RUN

6.

• Using clean hot water (60 degrees but not boiling)
• Clean fully around the dispense nozzle using a clean brush that will fit inside the nozzle

CLOSURE EXCEEDING 45 DAYS

1.

• As above through 1 – 6

2.

• To remove the product that has been sitting in the chambers for each 563 follow the on screen instructions for FLAVOUR CHANGE then press OFF DEFROST RUN for each barrel

ICEE INSTRUCTIONS

in the event of a long term closure

HOW TO CHANGE FLAVORS WITHIN AN FCB MACHINE:

1  →  Select barrel number to change flavor in. Press "OFF", then "DEFROST". Defrost time will take approximately 7 minutes.

2  →  While defrosting, remove old BIB and connect new BIB.

3  →  After defrost is complete, press "FILL" and "BEATER".

4 Place a large bucket under the valve, then pour product until flavor/color has changed.

5  Press, "BEATER" to turn off beater. Keeping bucket underneath faceplate and vent valve, pull vent valve ring to purge excess gas and fill barrel with liquid, fill until liquid level is at vent valve. 

Note:
Foam will exit the vent port on the faceplate underside, temporarily keep bucket in place.

6  →  →  Press "FILL" to turn off fill, then "DEFROST" followed by "RUN" to start to refreeze. This step will take approximately 30 minutes.

7 After product is frozen and compressor turns off, pour several drinks to condition barrel. The first few drinks will be very wet and heavy.
